The Schematics have been analyzed from
a die picture by InfosecDJ.
The chip is identified as:

MSM OKi
79H041

It is a MSM79V000 gate array
from the MSM70V000 series.
– 3289 Basic Cells
– 23 Columns, 143 Rows

The konami 007781 is a tilemap pixel shift register
with scroll. The tiles are 8x8 pixels, but the 007781
don't care about vertical line position. 007781 handles
two tilemaps at a time:
– V1, tilemap 1
– V2, tilemap 2

8 pixels, 4 bits each, of color data at a time are latched
into the registers. The palette code is latched 8 pixel
clocks earlier from VRAM. This is because the
data in the 007780 DRAM controller and DRAM takes 8
pixel clocks to process.

V1 latches pixels when the horizontal counter, going
from 0 to 7, goes to 2 (HCNT2) and V2 latches when
the horizontal counter goes to 4.
Data latched for:
– V1, when HCNT[2:0] == 2
– V2, when HCNT[2:0] == 4

The pixel code and palette color data are shifted
out between 1 to 9 pixel clocks after HCNT[2:0] == 4,
depending on if scroll or horizontal flip are active.

The pixel data is latched when
HCNT2 goes high.
The pixel data order is

1. VC31,VC30,VC29,VC28
2. VC27,VC26,VC25,VC24
3. VC23,VC22,VC21,VC20
4. VC19,VC18,VC17,VC16
5. VC15,VC14,VC13,VC12
6. VC11,VC10,VC9,VC8
7. VC7,VC6,VC5,VC4
9. VC3,VC2,VC1,VC0

The palette color is delayed 8 pixels. It is because
the 007780 takes 8 pixels to process the pixel data.

The pixel data is latched when
HC4 goes high.
The pixel data order is

1. VC31,VC30,VC29,VC28
2. VC27,VC26,VC25,VC24
3. VC23,VC22,VC21,VC20
4. VC19,VC18,VC17,VC16
5. VC15,VC14,VC13,VC12
6. VC11,VC10,VC9,VC8
7. VC7,VC6,VC5,VC4
8. VC3,VC2,VC1,VC0

When flip is not active
pixel data is delayed one pixel.
