

The 007786 is a sprite frame buffer controller.
It works in two modes:
– When SEL = 0, it generates addresses for the frame buffer.
– When SEL = 1, it parses sprite character data.
It also handles refreshing of data in the DRAM memory.

The 007786 uses an OKI 74V000 CMOS gate array
with 2400 unit cells.

Output buffer enable

Addressing mode, SEL = 0

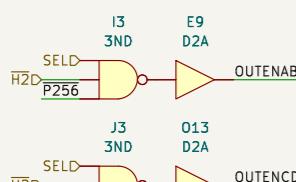

Outputs are enabled all the time when the 007786 is used for addressing sprite characters in the frame buffer.
SEL = 0.

Sprite character mode, SEL = 1

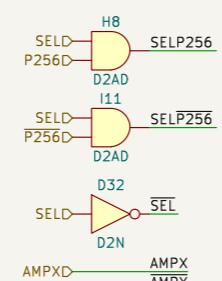

When used for writing sprite characters to the frame buffer it is enabled when H2 = 1 or for C and D outputs when P256 = 1. The corresponding for C and D outputs is when P256 = 0.

A and B output
OUTENAB =
-SEL | -H2 | -P256 =
-SEL | H2 | P256

OUTENCD =
-SEL | -H2 | -P256 =
-SEL | H2 | P256

SCM, P256 = 1, AB out enabled.

AMPX and $\overline{\text{AMPX}}$ selects between Row and Columns in the frame buffer DRAM.
